

Ví Dụ 1 - Tạo Bảng Categories

```
php artisan make:migration create_categories_table --create=categories
```

Trong file migration vừa tạo:

```
public function up()
{
    Schema::create('categories', function (Blueprint $table) {
        $table->bigIncrements('id');
        $table->string('name')->nullable();
        $table->text('description')->nullable();
        $table->timestamps();
    });
}

public function down()
{
    Schema::dropIfExists('categories');
}
```

Ví Dụ 2 - Chỉnh Sửa Bảng Categories

```
php artisan make:migration update_categories_table --table=categories
```

File migration sẽ như sau:

```
public function up()
{
    Schema::table('categories', function (Blueprint $table) {
        $table->string('name_category')->nullable()->change();
        $table->string('description')->nullable()->change();
        $table->integer('parent_id')->nullable();
    });
}

public function down()
{
    Schema::table('categories', function (Blueprint $table) {
        $table->string('name')->nullable()->change();
        $table->text('description')->nullable()->change();
        $table->dropColumn('parent_id');
    });
}
```
